

02424 Week 11

Exercise 1

This continues the exercise from last week. I.e. it is about the model shown in Example 5.7

- 1 Estimate the parameters using `glmmTMB`
- 2 Check the accuracy of the Laplace approximation by importance sampling
- 3 Estimate the model using numerical integration
- 4 Estimate the parameters of the model using the general setup in TMB (i.e. write a `.cpp` file)
